

October 2024 Dental Tutors visit to Shijiazhuang Medical College, China

College of International Education organizes foreign teachers to visit affiliated hospitals the International College of Education and Education organized foreign teachers Marcus Trocha, Lucia Grauel and Aida Kromelyte to visit the affiliated hospital.

The event not only allowed the foreign teachers to experience the advanced medical facilities and warm services of the Affiliated Hospital, but also provided them with a platform for face-to-face communication with Chinese medical staff, which further promoted the cooperation and development in the field of international education and medical care. On the day of the event, three foreign teachers from Germany and the United Kingdom visited the affiliated hospital of our school under the guidance of the relevant person in charge of the School of International Education. Xu Jianqiang, vice president of the affiliated hospital, accompanied the visit in person.

President Xu briefly introduced the history, development status and future plans of the hospital, especially the achievements and vision of the hospital in international medical cooperation and medical education. President Xu introduces hospital construction for visitors Then, President Xu accompanied the foreign teachers to visit the intelligent medicine storehouse, medical imaging department, rehabilitation department, Traditional Chinese Medicine Department, medical laboratory department, physical examination center, kidney center, Obstetric and Gynecologic Department, confinement center and a series of special departments of the affiliated hospital. In the intelligent medicine warehouse, foreign teachers saw the efficient and accurate automatic machine dispensing and dispensing equipment and praised the efficient management and quality service of the hospital.

In the Imaging Department, and the Laboratory Department, the directors of each department introduced to the visitors in detail the domestic and even world-class laboratory equipment equipped with the hospital. In the Traditional Chinese Medicine Department, the foreign teachers learned about the acupuncture, moxibustion and other treatment methods adopted by Chinese traditional medicine for patients. In the medical center, kidney center, Obstetric and Gynecologic Department confinement center, visitors experienced the hospital's high level of treatment and patient-first humanistic care. The directors of each department introduce the characteristics of the department to the visitors.

During the visit, the foreign teachers also interacted with the medical staff. In view of the foreign teachers' questions about hospital management, medical technology, doctor-patient relationship and so on, the medical staff patiently answered one by one. Through the communication, the foreign teachers not only enhanced the understanding

of the hospital work, but also felt the professionalism and humanistic care of the medical staff of the affiliated hospital.

The visit not only allowed the foreign teachers to have a more comprehensive and in-depth understanding of the affiliated hospitals and medical construction of our school, but also provided valuable experience and inspiration for their future teaching and research work. At the same time, through communication with foreign teachers, the medical staff also broadened their horizons and learned foreign advanced medical concepts and educational methods. It is hoped that the two sides will have more exchanges in the future to promote cooperation and development in the fields of medicine and education.
